## SUMMARY

Computer Science Engineering student with hands-on experience in **software development, AI/ML, and backend engineering** through multiple industry internships. Passionate about **designing scalable applications, solving real-world problems, and building production-oriented systems** using Java, Python, and modern development frameworks.

## EDUCATION

**B.E. in Computer Science** | Sai Vidya Institute of Technology (VTU) | Current Semester : 6<sup>th</sup> (CGPA: 8.81/10) **Present**  
**XII (PCMB)** | Shaanthiniketans P.U College. (93.04%) **2023**  
**X(State Board)** | Indian Public School. (99.24%) **2021**

## EXPERIENCE

**AnveshakHub Private Limited. – Software Development Intern** June 2026 – Present

- Developing enterprise-grade web applications by implementing scalable features aligned with real industry problem statements.
- Designing and integrating backend modules, REST APIs, and database components to support efficient application workflows.
- Collaborating with cross-functional teams to analyse requirements, optimize system functionality, and deliver high-quality software solutions.
- Contributing to software testing, documentation, debugging, and feature enhancement while following modern software engineering practices.

**CODTECH IT Solutions Pvt. Ltd. – Software Intern** Nov 2025 – Feb 2026

- Developed Java-based applications implementing file handling, API integration, and concurrent processing concepts.
- Applied modular coding practices and structured design approaches to build maintainable and efficient programs.

**Elevate Labs – AI & Machine Learning Intern** Jan 01, 2026 – Apr 30, 2026

- Built and evaluated machine learning models across multiple real-world datasets, focusing on classification and prediction tasks.
- Worked on data preprocessing, feature engineering, and performance evaluation, gaining hands-on experience in end-to-end ML workflows.

## PROJECTS

**Adaptive Closed-Loop Zero Trust Security Model with Deception Intelligence** | [Github](#)

- Designed and developed an Adaptive Zero Trust API Gateway that dynamically redirects suspicious login attempts to a high-fidelity deception (honeypot) environment, enabling real-time threat containment, behavioral monitoring, and automated risk assessment.
- Engineered a live Security Operations Center (SOC) dashboard with Server-Sent Events (SSE) and Gemini AI integration to analyze attacker behavior, generate plain-English threat intelligence reports, and provide actionable security insights through adaptive threat scoring

**Samudra Sutra – Environmental Intelligence Platform** | [Github](#)

- Built a scalable platform integrating AI-based classification and geospatial analysis to monitor and track pollution patterns.
- Designed a real-time data visualization system enabling actionable insights for environmental monitoring and decision-making.

**AEGIS – AI Financial Threat Intelligence Engine** | [Github](#)

- Designed a multi-model AI system combining anomaly detection, fraud prediction, and credit risk analysis using Isolation Forest, Random Forest, and Logistic Regression.
- Implemented a unified risk scoring engine with AI-generated financial recommendations, simulating real-world fintech decision systems.

**FacultyTrack – AI-Based Faculty Monitoring System** | [Github](#)

- Developed a face recognition-based attendance system designed for institutional use, enabling automated faculty tracking and monitoring.
- Implemented a real-time recognition pipeline with model training, live camera integration, and dashboard interface, structured for practical deployment.

**FraudShield AI – Credit Card Fraud Detection System** | [Github](#)

- Built an end-to-end fraud detection pipeline using XGBoost with SMOTE, achieving ~0.97 ROC-AUC on highly imbalanced financial data.
- Developed a real-time dashboard with transaction simulation and fraud scoring, reflecting production-level fintech applications.

**ResumeMatch AI – NLP Resume Ranking System** | [Github](#)

- Developed an NLP-based ranking engine using TF-IDF and cosine similarity to match resumes with job descriptions.
- Implemented automated skill extraction, scoring, and report generation, enabling efficient and data-driven hiring workflows.

## SKILLS

- Languages: Python, Java, JavaScript.
- Web Development: HTML, CSS, React.js, Node.js, Express.js, REST APIs.
- Database: PostgreSQL, MongoDB, Firebase, Supabase, NoSQL.

- **Core Concepts:** Data Structures, DBMS, Object-Oriented Programming, Problem Solving.
- **Tools:** Git, GitHub, VS Code, Jupyter Notebook, Figma.
- **AI & Development:** Prompt Engineering, AI-assisted development, Feature Engineering.

ACHIEVEMENTS

---

- Treasurer – IEEE Educational Society, managed budgeting and financial planning.
- Joint Secretary – IEEE, coordinated technical events and student activities.
- Lead Coordinator – CodeSprint Hackathon 2025 & Webcraft 2025.
- Selected Participant – Startup Mahakumbh 2025.
- **Founder & CEO – Naandi** (Startup initiative focused on building scalable, real-world service ecosystem platforms)
- Designed and documented Election Management System architecture.
